

Spills

1. If you have a spill, it is important to first let your TA know about it immediately. You and your TA will then assess if you can clean up the mess or if it will require the stockroom.
2. If it is to be you, and it requires the spill kit, go get it (if you do not know, ask where it is located). Normally spills that require spill kits will be handled by the stockroom, so this is not something that a student will usually have to do.
3. If it does not require a spill kit, then make sure that you clean the entire area thoroughly. Make sure that you wear gloves when cleaning up the area. If there is broken glass involved, ensure that you are careful so that you do not cut yourself.
4. If there is any waste, be sure to put the waste into the appropriate containers.
